Software Engineer with hands-on experience in backend development and blockchain engineering. Currently building and maintaining a core Java module that powers customer-facing test automation workflows at a SaaS testing platform. Prior experience developing Solidity smart contracts and integrating them with frontend applications across EVM-compatible chains. Comfortable working inside complex, production codebases and motivated by writing reliable, correct code.

EXPERIENCE

TestGrid.io

Software Engineer

Jan 2026 – Present

Atlanta, GA (Remote)

- Own and maintain a core Java module powering customer test automation workflows used by engineering teams to write and execute automated tests.
- Fix bugs and ship improvements across the testing platform while working in an established production codebase alongside senior engineers.

CodeMinto Infotech

Blockchain Developer

Nov 2024 – Oct 2025

Ahmedabad, India (On-site)

- Developed Solidity smart contracts for token and NFT use cases across EVM-compatible chains.
- Integrated smart contracts with frontend applications, connecting wallets and on-chain logic to user-facing interfaces.

SKILLS

Languages

Java, Solidity, JavaScript, SQL

Backend

Spring Boot, REST APIs, Core Java, SQL

Blockchain

Ethereum, Solidity, Hardhat, Ethers.js, OpenZeppelin

Tools

Git, Docker, Linux, Postman, Maven

PROJECTS

CrownTest – Remote Test Automation Platform

[GitHub](#)

Java, Selenium, Appium, Maven, Node.js, Nginx

Built a full-stack test automation platform that lets users write and execute Java tests on a remotely hosted Android device. Developed a custom Java SDK that abstracts Appium, Selenium, drivers, locators, waits, and assertions behind a simplified testing API.

Banking Application Backend

[GitHub](#)

Java, Spring Boot, REST APIs, SQL

Built REST APIs for account creation, balance retrieval, deposits, and withdrawals using a layered controller, service, and repository architecture.

DragonRunner

[Live](#)

Solidity, Hardhat, Ethers.js

Built smart contracts and on-chain reward logic for a blockchain gaming application with frontend contract integration and automated tests.

EDUCATION

P.P. Savani University

2022 – 2026

Bachelor of Technology in Computer Science Engineering
